

# MasterLine®

By Univar

MasterLine® I MaxxPro® is a non-repellent termiticide/insecticide that provides a proven barrier or zone around structures. Its unique chemistry binds to the soil and does not easily move. Because MasterLine I MaxxPro is non-repellent, termites cannot detect it and readily move through the treated areas. Not only will termites that directly contact the barrier die, but other termites that come in contact with affected termites will also die. This substantially reduces or eliminates the entire termite colony. Its proven efficacy, as well as its low end use cost, make MasterLine I MaxxPro the smart choice for termite control. Best of all, you get solid support from Univar on every MasterLine product.

## FEATURES
